Think carefully about the how the letter shapes are joined...

- There are **two** main joins:
  - 1) a **diagonal join to half height**
  - 2) a **washing line join**
- With letter e, the **diagonal join** has to **sweep round** to form the **e** (**e**gg) and the **washing line join** has to **dip down** to form the **e** (**a**re).
- When a letter that ends with a **washing line join** (o, r, v, w, x) is followed by a letter in the **c group** (c, a, d, s, g, o, q) a **hook over** is **added** to the **washing line join** to **reach the starting point** of the next letter (**o**ak, **r**ag, **v**an, **w**ant, **e**xam).
